

AI-powered compliance verification for critical infrastructure.

Skyello converts regulations into machine-executable rules and verifies every obligation across your facilities — with full citation traceability from field to filing.

THE PROBLEM

Compliance is fragmented by design

Regulations live in legal documents. Inspections happen on paper or disconnected mobile apps. Evidence is reconstructed after the fact. When auditors arrive, teams spend weeks assembling records that should have existed from the start.

The result is missed obligations, inconsistent enforcement across sites and vendors, and audit exposure that grows with every facility you operate.

HOW SKYELLO WORKS

From regulation to audit-ready record

Skyello ingests your regulatory documents, extracts every obligation into machine-executable rules, and connects them directly to field inspections. Every finding links back to its regulatory source — automatically.

| <p>01</p> <h4>Ingest</h4> <p>Upload consent decrees, EPA requirements, SOPs, and facility-specific regulations. Skyello parses every document and extracts each obligation into a machine-executable rule with its regulatory source attached.</p> | <p>02</p> <h4>Inspect</h4> <p>Inspectors scan assets in the field using ruggedized mobile devices. Every checklist item maps directly to the regulation requiring it. Offline-capable, with automatic asset identification.</p> | <p>03</p> <h4>Enforce</h4> <p>Every inspection generates an audit-ready compliance record with regulatory citations, timestamped evidence, and inspector verification. Status is tracked continuously across every asset and facility.</p> |

BUILT FOR REGULATED INDUSTRIES

- Oil & gas refining
- Chemical processing
- Power generation
- Mining
- Agricultural operations

Supports EPA consent decrees, federal and state environmental regulations, OSHA requirements, and facility-specific operational standards.

MEASURABLE RESULTS

| | |
|-----------------------------------------------------------------------|-------------------------------------------------------------------------------|
| <p>95%+ obligation coverage across tracked assets</p> | <p>100% citation traceability finding to regulatory source</p> |
| <p>30%+ faster inspections reduction in cycle time</p> | <p>Zero paper records fully digital compliance</p> |
